# 2014 Crop Results

## Vitazyme on Okra

Researcher: Rock Lubin

Research organization: Acra Industries, Haiti

Location: Mirebalais, Haiti

Variety: unknown

Planting date: unknown

Experimental design: This experiment was part of a multi-crop testing program that was established in December of 2011, to evaluate the efficacy of Vitazyme for increasing crop yields in Haiti. The test area was 1 hectare (10,000 m<sup>2</sup>) for the treated and control plots.

### 1. Control

### 2. Vitazyme

Fertilization: unknown

Vitazyme application: 1 liter/ha (13 oz/acre)

Harvest date: unknown

Yield results:

Treatment	Yield kg/ha	Yield change kg/ha
Control	900	—
Vitazyme	1,225	325 (36%)

**Increase in okra yield  
with Vitazyme: 36%**

Conclusions: An okra study in Haiti revealed a great increase in yield with Vitazyme application, a full 36% above the untreated control. This program is shown to hold great promise in helping to alleviate food production problems in this developing country.
